---
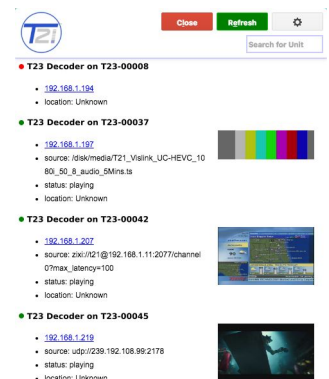

[1] Insert a USB disk with a file named 9261reset.txt to factory restore the unit. The contents of the file does not matter, the filename is the trigger.

Upgrading firmware from the Web UI

1. Log into the T9261-E web GUI and navigate to the HOST Tab.
2. Download the firmware to a disk and folder on your Windows/MAC/Linux computer.
3. Choose File (firmware) from your computer's disk and folder.
4. Click "Upload" button to upload the firmware from your computer to the T9261-E.
5. Count down number in "OK" button indicates how long until update automatically continues. Click "OK" to immediately start update.
6. "Update has begun" prompt. Select "OK" close the window.

Uploading new firmware from a USB disk

The T9261-E supports USB2 and USB3 media devices. To upload the new firmware from a USB media device (thumb-drive), follow the steps below.

1. Download the firmware to a disk and folder on your computer.
2. Copy the firmware file from your computer's disk and folder to the USB media device.
   a. There must ONLY be one copy of the firmware on the media device. Remove previous versions before inserting the media device into the T9261-E USB interface.
3. Safely remove the media device from your PC.
4. Insert the media device into the USB interface on the T9261-E.
5. The top green LED will go off once the system mounts the media device and starts the upgrade script. The disk mount and script start takes about 10 seconds. The upgrade will take a little over a minute to complete. The device will reboot automatically.
6. You can remove the USB media device from the T9261-E after the unit reboots and starts decoding.
7. To confirm the update was successful:

Check the firmware version on the Web UI on the right side just above the tabs. The version should reflect the name of the firmware file loaded onto the USB media device.

SN: 9261E-00011
FW: 2017-10-17_15-15-17

ENCODING

Insert the USB media device into your PC and open the firmwareUpdate log.

9261-00058-firmwareUpdate.log
9261update-2015-09-25_17-12-24
